Firstlogic® Data Quality Management For Informatica® PowerCenter®

Enable Data Quality within Informatica PowerCenter

Quick Facts

Summary

The Firstlogic® Data Quality Management (DQM) for Informatica® PowerCenter® Connector leverages the SAP® BusinessObjects™ Data Quality Management software platform to provide a prebuilt solution with fully integrated transforms and data flows to improve data quality for your Informatica® PowerCenter® platform.

Business Challenges

- Problems with data quality, such as inconsistent definitions and semantics, silos of information, and a lack of transparency
- Need to support a data quality strategy to help ensure highest quality levels during migration and integration projects

Key Features

- **Data cleansing** – Handle both structured and unstructured data formats, and prepare the information for matching through parsing and standardization
- **Data matching and consolidation** – Import entire files, set match criteria, split files into smaller groups for faster matching, and eliminate duplicates
- **Options for global data cleansing and matching** – Address global needs with functionality specific to locale and language
- **Enforcement of your organization's specific business rules** – Help ensure the information that enters your data warehouse or data store is the best fit for your organization

Business Benefits

- **Increased business agility** through more efficient, well-prepared data migration projects
- **Stronger performance** by reducing business disruption caused by poor-quality data
- **Greater support for core business processes and users** throughout the organization based on a foundation of trusted, quality data
- **Better project management and efficiency** with greater visibility and process transparency
- **Cost and time savings** thanks to early detection of potential problems in data migration projects
- **Long-term data quality** with data governance processes that live on after the initial project

The Firstlogic® Data Quality Management Informatica PowerCenter Connector lets you embed and quickly deploy data quality functionality within the Informatica PowerCenter data integration process – so you can gain the highest level of reliability and accuracy.

Features & Functions

Prepackaged native integration – Leverage prepackaged data quality best practices and functionality for Informatica PowerCenter environments.

- Data cleansing – Handle both structured and unstructured data formats, and prepare the information for matching through parsing and standardization.
- Data matching and consolidation – Import entire files, set match criteria, split files into smaller groups for faster matching, and eliminate duplicates.

- Global data cleansing and matching – Address global needs with functionality specific to locale and language.
- Enforcement of your organization's specific business rules – Help ensure the information that enters your data warehouse or data store is the best fit for your organization.

Benefits

- Deliver high-quality data with efficient, well-prepared data migration projects.

- Eliminate duplicate and inaccurate information – reducing business disruption caused by poor-quality data.
- Support core business processes and users based on a foundation of trusted, quality data.
- Improve project management and efficiency with greater visibility and process transparency.
- Identify early detection of potential problems in data migration projects.
- Achieve long-term data quality with data governance processes that live on after the initial project.

Supported Systems and Platforms

SAP® BusinessObjects™ Data Services

- Release 3 (32 bit) Windows®, Linux®, AIX®, Solaris®
- Release 4 (64 bit) Windows®, Linux®, AIX®, Solaris®

Informatica® PowerCenter®

- Release 8 – Windows®, Linux®, AIX®, Solaris®
- Release 9 – Windows®, Linux®, AIX®, Solaris®
- Fully integrated transform within the PowerCenter® Designer
